PROBLEM STATEMENT

1. The user needs to know about the fake product reviews so that they can purchase original products only.

2. The user needs to feel secure about their data so that they don't feel about their lack of security and privacy leaks.

3. The user needs to get the assurances for the product ordered because their will be different material or colour inappropriate to what they have ordered so they won't worry about quality of the product.

4. The user need a fast delivery so that they can get a product within the time they want.

5. The user want to know the original price of the product so that they can buy without any loss because they find a different cost for the same product in different application.

6. The user should find the application to be user friendly then they can understand and easy to use the application.
